Practical – 12

Practical Title: Event Management CRUD with Poster Upload and File Validation

Problem Definition: Develop event management functionality for admin users. Admin can add, view, update, delete, and upload event posters with file type and file size validation.

A. Theory

1. Are add, update, and delete functionalities implemented correctly?
Yes. The application allows the admin to add new events, update existing event details, and delete events. These operations are performed using PHP and MySQL prepared statements to maintain accurate database records.

2. Is the UI linked with the database correctly?
Yes. The user interface is connected to the MySQL database through PHP using MySQLi. Event records are retrieved from the database and displayed on the dashboard. Any addition, modification, or deletion made through the interface is reflected in the database.

3. Are poster uploads validated for type and size?
Yes. Poster uploads are validated on the server side. Only JPG, PNG, and WEBP image formats are accepted, and the maximum permitted file size is 2 MB. Invalid file types and oversized files are rejected with an appropriate error message.

4. Are success and failure messages displayed?
Yes. The application displays success messages when events are added, updated, or deleted successfully. It also displays failure messages for invalid login credentials, missing required fields, unsupported poster formats, oversized files, and database operation errors.

B. Implementation/ Output/Result:

The Event Management System was developed using PHP and MySQL. A database named practical12_db was created to store administrator credentials and event details. PHP and MySQL connectivity was established using MySQLi and prepared statements.

An administrator login system was implemented using PHP sessions and password verification. After successful login, the administrator can view all available events and perform CRUD operations, including adding, updating, and deleting event records.

The application also supports event poster uploads. Server-side validation is implemented to accept only JPG, PNG, and WEBP formats with a maximum file size of 2 MB. Invalid file formats and oversized files are rejected. Appropriate success and error messages are displayed for different operations. A logout feature is also provided to securely end the administrator session.

Result: The Event Management System was successfully implemented and tested using XAMPP. Database connectivity, CRUD operations, administrator authentication, and poster upload validation worked as expected.

C. Evidence of Work (Screenshots):

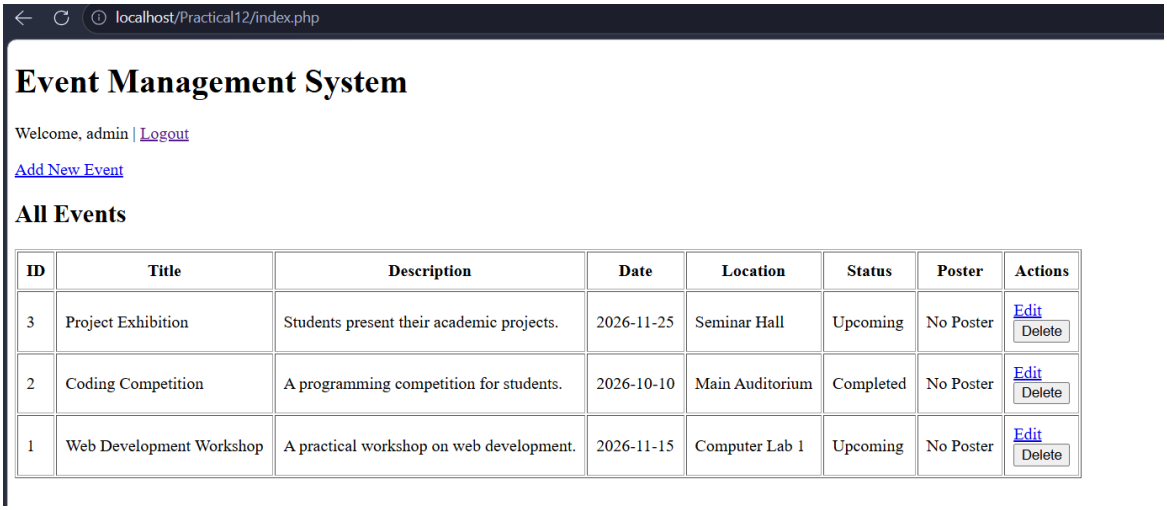

Fig1: Admin Dashboard – View Events

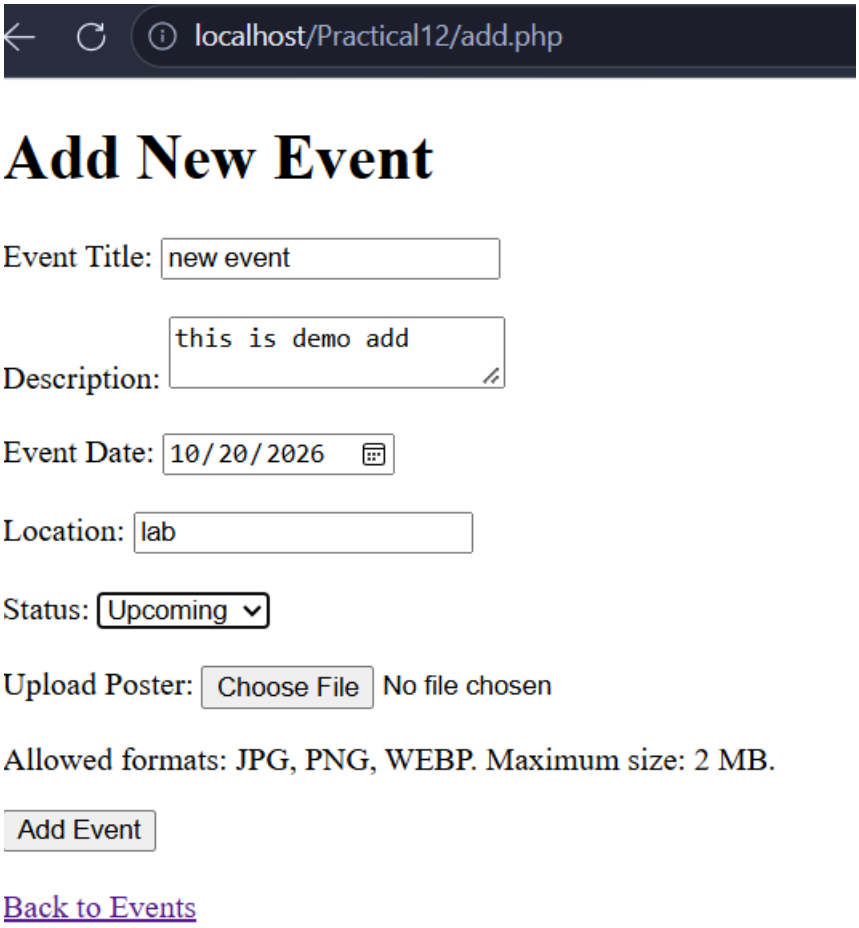

Fig2: Add Event – Successful Insertion

Event Management System

Welcome, admin | Logout

Event updated successfully.

Add New Event

All Events

ID	Title	Description	Date	Location	Status	Poster	Actions
4	new event	this is demo add	2026-10-20	lab	Upcoming		Edit Delete
3	Project Exhibition	Students present their academic projects.	2026-11-25	Seminar Hall	Upcoming	No Poster	Edit Delete
2	Coding Competition	A programming competition for students.	2026-10-10	Main Auditorium	Completed	No Poster	Edit Delete
1	Web Development Workshop	A practical workshop on web development.	2026-11-15	Computer Lab 1	Upcoming	No Poster	Edit Delete

E. Challenges Faced:

1. Establishing a proper connection between PHP and the MySQL database.
2. Implementing secure administrator login using sessions and password verification.
3. Validating poster file formats and size while handling file uploads correctly.
4. Maintaining database records and uploaded poster files during update and delete operations.

F. Learning Outcomes:

The Event Management System was successfully developed using PHP and MySQL. It provides administrator login and complete CRUD operations for managing events. Poster uploads are validated based on file type and size to prevent invalid files. The system displays appropriate success and error messages. Overall, the practical helped in understanding database connectivity, file handling, validation, and session management in PHP.
